CAREER OBJECTIVE

To work for an organisation to pursue a highly rewarding career where I can utilize my skills and knowledge efficiently & enhance them for the organizational growth.

EDUCATIONAL QUALIFICATION

- ➢ B.Tech Computer Science Engineering (2015-2019) with 69.54%, Keshav Memorial Institute of Technology ,JNTU
- ➢ XII M.P.C with 91.7%, NRI junior college(2012-2014),Hyderabad-BIE
- ➢ X Board with 9.5 CGPA, Narayana Concept School(2012),Hyderabad-SSC

TECHNICAL KNOWLEDGE

- ➢ Languages: C, Java SE 8, Python(Beginner)
- ➢ Frameworks: Spring, Spring boot, MVC, Kafka, OAuth 2 , Web services
- ➢ Databases : MariaDB, SQL , MongoDB
- ➢ Tools & IDE's : GIT, Bitbucket, SVN , Jenkins , Openshift 3,Sonar,Nexus Iq, Fortify, JIRA, Confluence, Soap UI, Postman , HeidiSql, Robo 3T, JMeter

WORK EXPERIENCE:

- ➢ Application Developer at DBS Asia hub2 (Jul'19 to present):
  - • Experience in designing and developing Enterprise Level Applications.
  - • Worked on developing Rest microservices using Spring boot.
  - • Experience in creating CI/CD pipelines and deployments of the applications

- ➢ Associate trainee at Kony Professional Services(Jun'18 to Jun'19):
  - • Experience in designing and developing mobile applications using Kony visualizer platform.
  - • Worked on middleware integration using mobile fabric.

CERTIFICATIONS & ACHIEVEMENTS

- ➢ Oracle Certified Associate, Java SE 8 Programmer(2017)
- ➢ Selected for "Amazon Campus Mentorship Series(ACMS)" (2018)
- ➢ Secure Code Warrior Certified "AppSec Bronze titan"

PROJECT DETAILS

- ➢ SCHEDULERX :
  - Desciption : Developed a service to enable and support scheduling tasks. This service is used to trigger rest api's at the defined intervals as per the cron expression.
  - Spring boot and Quartz framework are used in developing the scheduler.

- ➢ UTILX_AUTHENTICATOR :
  - Descipton : Developed a service to authenticate LDAP users.
  - Authenticated users based on the registered LDAP roles. Scaled the application to support user authentication for multiple projects.
  - Used Spring boot and Oauth2 technologies . This is like a SSO to access multiple services.
- ➢ S3 Sync :
  - Desciption : Developed a Springboot service which is integrated with AWS S3 . This service is connected to multiple S3 buckets to transfer files from one S3 bucket to another bucket.
  - This service is deployed on an VM server.
- ➢ MAILX:
  - Description : This project is based on microservice architecture. Developed multiple microservices to support fetching emails of registered mailboxes from outlook and routing the email content based on rules and actions.
  - Exchange Webservices(EWS) framework is used along with Spring boot to pool emails from On Premise and OnCloud mailboxes.
  - A rule Engine is developed based on which respective actions were performed.
